NEW !!

***Maintenance Free !!!**

From the leader in Mechanical sirens comes the top of the line Defender. Featuring the industry's largest drive motor, this 8 HP, battery powered siren delivers all the features one expects from a premium warning device.

Utilizing a 460 Hz tone, the Defender's low pitch sound is designed to penetrate trees and obstacles, making the warning area more complete. The unit is also available in 920 Hz, when distance is a must.

The Defender features the same bullet-proof design and construction as its Sentry siblings. We use top quality materials and cut no corners. We feature top of the line, maintenance free rotating mechanisms and hand rolled, custom formed projectors.

All exposed siren components are of heavy gauge aluminum alloy and electro-plated, galvanized steel construction, which are Powder Coated for the most durable finish available.

The Defender can be special ordered in ANY COLOR, and is even available in Stainless Steel. The entire mass of the siren is centered over the pole so no guy wires are required. Total shipping weight of the Defender is 385 lbs.

**From the leader in Mechanical sirens comes the Defender.
